Claim 9-10; Page 77: 109pp: English.

Claim 9-10; Page 77: 109pp: English.

MRNA from the known hybridoms F105 was converted to cDNA and this subjected to PCK amplification using primers corresp. to appropriate parts of the heavy or light chains and having restriction sites to permit cloning. The extension prods. were isolated and sequenced. The recombinant human moncolonal antibody (MAb) binds to a discontinuous epitope on the HIV gpl20 envelope glycoprotein, blocks the binding of gpl20 to the CDA receptor, and neutralises a broad deficiency, esp at doses of 0.1-10 mg/kg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            79 spslksrvtisvetsknqfslkltsmtaadtavyycargpvpavfygdyrldp----wqqg 135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 NPSLNDRVFWSVDKSKDQVSLRLSSV1AAD/TAVYYCAKSPIK-MNGSRMMLDAFDIWGGG 119

Disclosure, Fig 5, 32pp; English.

The DNA sequence of eleven monoclonal antibodies are represented in 019145-57. Synthetic genes, for both heavy and light chains may be created by combining selected CDR 1, 2, and 3 regions, which may be selected from different antibody mols. having varied binding specificity. The chimaeric anti-rho antibodies can be used for diagnosis and therapy, and are capable of providing blood-typing reagents of high specificity and reclability. They can also

                                                                                                                           A humanised antibody comprised CDPs criginally from a mouse MAD RSV19 specific for Respiratory Syncytial Virus transplanted onto heavy and light chain V region domains derived from NEWA and REI myeloma proteins, respectively. The framework regions of this CDP-grafted antibody were converted to the germ-line equivalent For conversion of the H-chain, the germ-line heavy chain DeF68/H6 (R4093) was used Germ-line framework regions are those present in mmature B cells, i.e. prior to any somatic mutation which takes place during maturation. Unlike mutations in the CDRs, any mutation place during maturation.

The DNA's encoding these sequences were amplified using the sequences given in T18040-58. The monoclonal antibody may be used in the diagnosis of hCMV.

The DNA sequence of eleven monoclonal antibodies are represented in 0119145-57. Synthetic genes, for both heavy and light chains may be created by combining selected CDR 1, 2, and 3 regions, which may be selected from different antibody mols. having varied binding specificity. The chimaeric anti-RhD antibodies can be used for diagnosis and therapy, and are capable of providing bloodtyping reagents of high specificity and reliability. They can also be used in passive immunisation to prevent haemolytic disease of the

Lymphocyte mRNA was converted to CDNA and subjected to PCR amplification using primers specific for heavy and light chain variable regions. The amplification products were inserted into a dicistronic vector to produce a library of fragments. E.coli XLI Blue cells were transformed with the library, Filamentous phade were produced which expressed the MAD regions on their surface. Panning with gp120 and gp41 resulted in the recovery of immunoreactive clones. The heavy chain VH region sequence R54270 neutralises HIVI

Monoclonal antibody, MAD; envelope, glycoprotein, gp120, HIV, AIDS;
CD4; receptor; hybridoma; polymerase chain reaction; PCR; heavy; light;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          represents a naturally occurring polyreactive antibody which binds to many antigens. Ab26 shares greatest sequence similarity with germline VV \ 71-4.
                       04-AUG-1995 (first entry)
Memon Limonoglobuli: variable heavy chain #52.
Primer: PCR. amplify human: immuncylobulin variable, heavy chain, cosmid; placents: Vector: pJB81: E.coll; mammalian.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vh 71-4 gene (042697).
Ab26 (042702) was derived from CD5· B cells of a healthy donor and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 64; 109pp; English.
The nucleotide sequence of rearranged F105 Vh (942698) was compare to two monoclonal antibodies (Ab26 · 942702) and 268·D · 942703), which by nucleotide sequence analysis, appear to use a rearranged
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA segments encoding menoclonal antibody - which binds to gpl20 and neutralises HIV, for treating AIDS, and for diagnosing and monitoring HIV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 550; DB 7; Length 116; Pred. Example 3; Fig 18; 366pp; English.

The sequences given in W01315-19; represent the heavy chain variable regions (VH) of a series of antibody fragments (FAb's) which are immunoreactive with HIV glycoprotein gp41. This sequence represents chains which bind to chook, DL 41 19. These sequences represent heavy chains which bind to othe light chain clones given in W01320-24. A monochonal antibody containing one of these Pab sequences may have the assay by 50 % at a concentration of less than 700 ng of antibody/m1. The MAD may be used for determining immunocompetence of a human anti-HIV antibody and in the detection of HIV infection.

DNA fragment comprising human immunoglobulin vh genes - for the production of human immunoglobulin in mammalian hosts production of human immunoglobulin in mammalian hosts production of human immunoglobulin in mammalian hosts.

Bisclosure: Page 107-108: 130pp: Japanese.

Comparison sequences (Re6295-51) are novel human immunoglobulin heavy chain comparison sequences encoded by novel isolated genes. The genes (078919-79002) were sequences encoded by novel isolated genes. The genes are subdivided into 5 families of Vh genes. The Comparison of 800 kb. The DNA fragments were isolated from comparison of 800 kb. The DNA fragments were isolated from the pagested with TagI restriction enzyme. The fragments were separated by digested with TagI restriction enzyme. The fragments were separated by colored with Claif gested cosmid vector pJ881. The fragments comparison and 35-45 kb fractions were collected. The fragments conducts were in vitro packed and infected into E.coli 490A. The products were then subcloned by colony hybridisation. The Vh genes and the DNA fragments encoding them are useful in producing human immunalian hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Monkey monoclonal antibody binding human B7.1 or B7.2 antigen -
Monkey monoclonal antibody binding human B7.1 or B7.2 antigen -
useful for treating autoimmune disease or graft-versus-host disease
claim 14. Fig 10B; B1pp; English.

2 Polypeptides (W01821 and W01822) respectively comprise primatised
forms of the light and heavy chains of cynomolgus monkey anti-human
B7.1 antigen monoclonal antibody 16C10. Cloned 16C10 light and
heavy variable genes (see also T62512 and T62513) are inserted into
a expression vector (pref. NEOSPLA) which contains human light and
heavy chain constant region genes to allow prodn. of the primatised
antibodies have also been produced (see also W01817-20). The
primatised antibodies inhibit the B7:CD28 pathway, making them
useful immunosuppressants for the treatment of autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20 qvqlqesgpglvkpsetlsltctvsggsv-ssyywswirqppgkglewigyiyysgstny ^{78}

Antibody containing immunoglobulin heavy chain mutation - with thyroid function stimulating activity claim 31; Page 14-15; 18pp; Japanese.

W24536 W24539 represent the immunoglobulin heavy and light chain variable regions isolated from peripheral blood lymphocyte strains. These sequences were isolated from the 8687 and 101-2 strains of peripheral blood lymphocytes of a Rasedow's disease patient. These sequences are replaced, deleted or inserted into an antibody, to create the antibodies of the invention. The antibodies of the invention have thyroid function stimulating activity, and act by combining with thyrotropin receptor. The antibody can be used in a method to detect autoantibodies which have thyroid function stimulating activity.
Immunoglobulin; variable region; heavy chain; thyrotropin receptor;
thyroid stimulating activity; light chain; Basedow's disease; antibody;
peripheral blood lymphocyte.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               79 nsslksrvtisvdtsknqfslklssvtaadtavyycaree-rggl-rdfaygmdvwgggt 136

Mean 42.049; Variance 78 185; scale 0.538 Statistics Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Claim 5: F12:21 Bpp: English.

Claim 5: F12:21 Bpp: English.

247. PREAUST uses VHIII and a D region which may have resulted from intra D-D recombination and/or gene conversion along with somatic mutation. It is radically different from any germ line D region. It utilises germ line JH3: It is of note that a cysteine at AA posn. Stutilises germ line JH3: It is of note that a cysteine at AA posn.

A novel recombinant DNA molecule which encodes a single chain fusion protein or antibody comprising the for region of both the light and heavy chains of an antibody (Ab) fused together, and an effector molecule, where the fusion protein or Ab has the binding specificity of monoclonal Ab (MAb) B1, B3 or B5, can be used for the production of such fusion proteins or antibodies. The fusion proteins can be used in compositions as an immunoctoxin to inhibit tumour cell growth. The single chain antibody can be used to detect the presence or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             absence of cells bearing a Lewis(Y) carbohydrate antigen in a patient. The antibodies are also useful as multiple targetting moieties, providing at least 2 kinds of biological activity. They can also be used in diagnostic assays and for the imaging of tumours when attached to a radiolabel and for the pathological diagnosis of tumours. Humanised antibodies are less immunogenic than the mouse MAbs B1, B3 and B5, making them more suitable for long term
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Single chain fusion proteins and antibodies - useful to diagnose and treat cancer, specifically bind Lewis(Y) related carbohydrate

This polypeptide sequence comprises.

Claim 16: Fig la(i): 184pp: English.

This polypeptide sequence comprises the VH domain of human serv antibody iB2 (also known as 7A3), which is specific for cransforming growth fartor (TGP) beta-1. It is encoded by a gene (TG0380) isolated from a peripheral blood lymphocyte library. The antigen-binding domains of human antibodies (see W15522-40) to TGF cantigen-binding domains of human antibodies (see W15522-40) to TGF cantigen-binding domains of human antibodies (see W15522-40) to TGF cantigen-binding domains of human antibodies (see W15522-40) to TGF cantigen-binding domains of human antibodies (see W15522-40) to TGF cantigen-binding domains of historials of human antibodies (see W15522-40) to TGF canting, see the used to counter the adverse offects of tGF beta-1 and/or beta-2 can be used to counter the adverse offects of the canting dibrosis, arterial injury, proliferative telinopathy, retinal detachment, adult respiratory distress syndrome, continosis, solver mayocatian infarction, post-angioplasty inverses, post mayoradial infarction, post-angioplasty inverses, solver mayoradial infarction, cataract, qlaucoma, restencis, scleroderma, vascular disorders, adaract, qlaucoma, cesp. neural scarring and glomerulonephritis, also (not claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 adsekgiftisidaskatlylgmaslraedtavyycaktgeyrggdssg odewqkgitv 119
